## PREFACE

This research report presents the results of the 2013 statewide performance tests of peanut, cotton and tobacco. The tests for various evaluations were conducted at several or all of the following locations: Bainbridge, Tifton, Plains and Midville in the Coastal Plain region and Athens in the Piedmont region. For identification of the test site locations, consult the map inside the back cover of this report.

Agronomic information such as grade, fiber data, plant height, lodging, disease occurrence, etc. is listed along with the yield data. Information concerning planting and harvest dates, soil type, and culture and fertilization practices used in each trial is included in footnotes. During 2013 HVI (High Volume Index) cotton fiber samples were sent to Macon, Georgia for analysis.

In order to have a broad base of information, a number of varieties, including experimental lines, are included in the trials, but this does not imply that all are recommended for Georgia. Varieties best suited to a specific area or for a particular purpose and agreed upon by College of Agricultural and Environmental Sciences agronomists are presented in the 2014 Spring Planting Schedule for Georgia (available from your county Extension office). Pesticides used for production practices are included for the benefit of the reader and do not imply any endorsement or preferential treatment by the University of Georgia Agricultural Experiment Station. For additional information, contact your local county Extension agent or the nearest experiment station.

The least significant difference (LSD) at the 10% level has been included in the tables to aid in comparing hybrids. If the yields' difference of any two varieties exceeds the LSD value, they can be considered different in yield ability.

This report is one of four publications presenting the 2013 performance of agronomic crops in Georgia. For more information concerning other crops, refer to one of the following research reports: 2013 Corn Performance Tests (Annual Publication 101-5), 2012-2013 Small Grains Performance Tests (Annual Publication 100-5), 2013 Soybean, Sorghum Grain and Silage, and Summer Annual Forage Performance Tests (Annual Publication 103-5), and 2012-2013 Canola Performance data available at [www.swvt.uga.edu/canola](http://www.swvt.uga.edu/canola).

This report, along with performance test information on other crops, is also available online at [www.swvt.uga.edu](http://www.swvt.uga.edu). Additional information may be obtained by writing to John Gassett, Crop and Soil Sciences Department, University of Georgia, Griffin Campus, 1109 Experiment St., Griffin, GA 30223-1797.

and Stevan S. LaHue, Editors*

## The Season

For the first time since 2009, Georgia agronomic producers in 2013 were fortunate to have adequate soil moisture for planting combined with an abundance of rainfall. Prolonged and periodic precipitation events led to spring plantings being delayed for many farmers in Georgia. Cooler than normal temperatures early in the planting season resulted in low soil temperatures and slowed germination for many crops. Irrigation was not a concern for most of the growing season. Rainfall throughout the season presented problems for ground applications of fungicides, insecticides, and supplemental nutrients. Extremely wet conditions in some areas of the state were detrimental to crops, resulting in leaching of nutrients and drowning of some crops.

Seasonal rainfall amounts recorded at the five test locations in Georgia during 2013 are listed in the table below. Attapulgus and Plains were the only two locations out of five that did not receive the normal amount of rainfall but were equal to or less than an inch of achieving it. This is a drastic improvement for the area around Plains over the past four years. Athens, Midville, and Tifton received 14-26% more rainfall than normal.

**2013 Rainfall<sup>1</sup>**

Month	Athens <sup>2</sup>	Attapulgus <sup>3</sup>	Midville	Plains	Tifton
inches					
March	3.75	5.20	3.84	4.84	3.13
April	2.92	4.76	3.89	3.16	4.44
May	4.13	0.86	1.83	2.25	2.61
June	10.59	4.33	16.17	5.24	13.31
July	9.16	11.94	4.93	7.77	5.79
August	4.87	6.21	4.78	5.91	8.71
September	3.44	3.27	1.31	2.16	3.12
October	0.67	0.63	0.70	0.36	0.63
November	2.12	4.23	0.78	2.54	3.50
Total	41.68	41.43	38.23	34.23	45.24
Normal (9 mo)	35.92	41.76	32.60	35.23	33.65

1. Data provided in part by Dr. I. Flitcroft, Georgia Station, Griffin, GA.

2. Plant Sciences Farm.

3. Attapulgus Research Center is the nearest location to the Bainbridge site.

Crop maturity progressed below the five-year average and harvest conditions were hampered due to wet weather conditions in 2013. Peanut producers planted 430,000 acres, a decrease of 41% from 2012 due mainly to a large amount of carryover stocks. Georgia peanut acreage hasn't been this low since the 1920s. Cotton producers seeded 1.37 million acres in Georgia, a 6% increase from last year and the largest

John D. Gassett is the program director of the statewide variety testing program and J. LaDon Day is a research scientist in the Department of Crop and Soil Sciences, Griffin Campus, Griffin, Georgia 30223-1797. Anton E. Coy, and Stevan S. LaHue are senior agricultural specialist and agricultural specialist, respectively, in the Department of Crop and Soil Sciences, Tifton Campus, Tifton, Georgia 31793-0748.

acreage since 2006. Tobacco producers in the state transplanted about 15,000 acres in 2013, the largest acreage in the last four years. However, only 12,800 acres of tobacco were harvested due to a wet summer and drowned acres.

The Georgia state peanut yield per acre in 2013 was 4,430 pounds, 150 pounds shy of last year's state record. As a result of the significant reduction in peanut acres planted, 1.89 million pounds of peanuts were produced in 2013, a 44% drop in production from 2012. Cotton yield of 850 lbs/acre this year was a 22% decrease from last year's record yield of 1,091 lbs/acre, a total production of 2.4 million bales or 18% less than the previous year. Georgia tobacco production on a per-acre basis was 1,750 pounds, a 22% decrease from 2012. Total production was 22.4 million pounds, 100,000 pounds less than last year and the least amount produced since 1932.

**Tifton, Georgia:**  
**Yield and Grade Performance**  
**Peanut Variety Trial, 2013, Nonirrigated (Continued)**

---

1. Advanced Georgia breeding line.
2. The F-test indicated no statistical differences at the alpha = 0.10 probability level; therefore an LSD value was not calculated.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD (P = 0.10).

Planted: May 16, 2013.  
Seeding Rate: 6 seed/row foot in 36" rows.  
Fertilization: 0 lb N, 0 lb P<sub>2</sub>O<sub>5</sub>, 0 lb K<sub>2</sub>O, and 0 lb/a gypsum.  
Soil Test: P = Medium, K = Medium, and pH = 6.2.  
Soil Type: Dothan loamy sand.  
Previous Crop: Corn.  
Management: Disked, moldboard plowed, rototilled; Sonalan, Basagran, Ultra Blazer, and Select used for weed control; Chlorothanil and Artisan used for fungal control.

Test conducted by A. Coy, R. Brooke, D. Dunn, and B. McCranie.

## Bainbridge, Georgia: Earlier Maturity Cotton Variety Performance, 2013, Irrigated (Continued)

---

\* A random quality sample was taken on the picker during cotton harvest and to determine percent lint fractions plot seed cotton was processed through a small gin in gin house on the UGA Tifton Campus.

1. The F-test indicated no statistical differences at the alpha = 0.10 probability level; therefore an LSD value was not calculated.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD (P = 0.10).

Planted: May 13, 2013.

Harvested: October 15, 2013.

Seeding Rate: 4 seeds/foot in 36" rows.

Soil Type: Bonneau blanton loamy sand.

Soil Test: P = High, K = Low, and pH = 6.1.

Fertilization: 21 lb N, 64 lb P<sub>2</sub>O<sub>5</sub>, and 48 lb K<sub>2</sub>O/acre. Sidedress: 160 lb N and 161 lb K<sub>2</sub>O/acre.

Previous Crop: Peanuts.

Management: Disked and subsoiled; Prowl, Roundup, MSMA, and Cotoran used for weed control; Prevathon, Transform, Suspend, and Bidrin used for insect control; Abound used for fungal control.

\* A random quality sample was taken on the picker during cotton harvest and to determine percent lint fractions plot seed cotton was processed through a small gin in gin house on the UGA Tifton Campus.

1. The F-test indicated no statistical differences at the alpha = 0.10 probability level; therefore an LSD value was not calculated.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD (P = 0.10).

Planted: May 13, 2013.

Harvested: October 15, 2013.

Seeding Rate: 4 seeds/foot in 36" rows.

Soil Type: Bonneau blanton loamy sand.

Soil Test: P = High, K = Low, and pH = 6.1.

Fertilization: 21 lb N, 64 lb P<sub>2</sub>O<sub>5</sub>, and 48 lb K<sub>2</sub>O/acre. Sidedress: 160 lb N and 161 lb K<sub>2</sub>O/acre.

Previous Crop: Peanuts.

Management: Disked and subsoiled; Prowl, Roundup, MSMA, and Cotoran used for weed control; Prevathon, Transform, Suspend, and Bidrin used for insect control; Abound used for fungal control.

\* A random quality sample was taken on the picker during cotton harvest and to determine percent lint fractions plot seed cotton was processed through a small gin in gin house on the UGA Tifton Campus.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD ( $P = 0.10$ ).

Planted: May 15, 2013.

Harvested: November 12, 2013.

Seeding Rate: 4 seeds/foot in 36" rows.

Soil Type: Tifton sandy loam.

Soil Test: P = Medium, K = Medium, and pH = 6.0.

Fertilization: 30 lb N, 60 lb  $P_2O_5$ , and 90 lb  $K_2O$ /acre. Sidedress: 65 lb N/acre.

Previous Crop: Peanuts.

Management: Disked, field conditioned, subsoiled/bedded; Reflex, Prowl, Staple, Acephate, MSMA, and Diuron used for weed control; Stance and Mepiquat used for PGR; Temik, Prevathon, and Bidrin used for insect control; Telone II used for nematode control; Drop and Folex ET used for defoliation; lime applied 1,000 lb/acre.

\* A random quality sample was taken on the picker during cotton harvest and to determine percent lint fractions plot seed cotton was processed through a small gin in gin house on the UGA Tifton Campus.

1. The F-test indicated no statistical differences at the alpha = 0.10 probability level; therefore an LSD value was not calculated.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD (P = 0.10).

Planted: May 15, 2013.

Harvested: December 12, 2013.

Seeding Rate: 4 seeds/foot in 36" rows.

Soil Type: Cecil sandy loam.

Soil Test: P = Medium, K = Medium, and pH = 6.4.

Fertilization: 14 lb N, 52 lb P<sub>2</sub>O<sub>5</sub>, and 105 lb K<sub>2</sub>O/acre. Sidedress: 100 lb N/acre.

Previous Crop: Soybeans.

Management: Disked, chisel plowed, field conditioned; Triflurian, Reflec, and Cotoran used for weed control; Telone II used or nematode control.

\* A random quality sample was taken on the picker during cotton harvest and to determine percent lint fractions plot seed cotton was processed through a small gin in gin house on the UGA Tifton Campus.

1. The F-test indicated no statistical differences at the alpha = 0.10 probability level; therefore an LSD value was not calculated.

**Bolding** indicates entries not significantly different from highest yielding entry based on Fisher's protected LSD (P = 0.10).

Planted: May 15, 2013.

Harvested: December 12, 2013.

Seeding Rate: 4 seeds/foot in 36" rows.

Soil Type: Cecil sandy loam.

Soil Test: P = Medium, K = Medium, and pH = 6.4.

Fertilization: 14 lb N, 52 lb P<sub>2</sub>O<sub>5</sub>, and 105 lb K<sub>2</sub>O/acre. Sidedress: 100 lb N/acre.

Previous Crop: Soybeans.

Management: Disked, chisel plowed, field conditioned; Triflurian, Reflex, and Cotoran used for weed control; Telone II used or nematode control.

LSD @ 0.05	592.1	1065.3	16.95	8.48						

Conducted on an Ocilla loamy sand soil fertilized with 1100 lbs/a of 6-6-18 and 119 lbs/a 15.5-0-0 with plants spaced 20-22 inches apart in 44-inch rows.

1. Price Index based on two year average (2011-2012) prices for U.S. government grades due to market inflation for 2013.
2. Numerical values ranging from 1-99 for flue-cured tobacco based on equivalent government grades - higher the number, higher the grade.

Researched by Stevan S. LaHue and W. Gay with support by grants from the Georgia Tobacco Commission.

Conducted on an Ocilla loamy sand soil fertilized with 1100 lbs/a of 6-6-18 and 119 lbs/a 15.5-0-0 with plants spaced 20-22 inches apart in 44-inch rows.

1. Price Index based on two year average (2011-2012) prices for U.S. government grades due to market inflation for 2013.
2. Numerical values ranging from 1-99 for flue-cured tobacco based on equivalent government grades - higher the number, higher the grade.

Researched by Stevan S. LaHue and W. Gay with support by grants from the Georgia Tobacco Commission.

### **“CERTIFIED SEED DOESN’T COST ... IT PAYS”**

#### **HERE’S WHY:**

- Known performance of varieties adapted to your area.
- A pedigree record that begins with the release of breeder seed and continues until it reaches the consumer as certified (blue tag) seed.
- Field inspected for trueness to variety and inseparable from other crop and weed seed.
- Certified seed can only be conditioned in an approved facility.
- Certified seed must meet High Quality standards as to germination and purity.
- Free of noxious weeds.

*The planting of CERTIFIED SEED eliminates many of the risks associated with crop production. For sources of Certified seed, contact your local county Extension agent or the Georgia Crop Improvement Association, Inc. (706-542-2351)*
