

# UGA Feed Cost Analyzer

*Lawton Stewart, Extension Animal Scientist  
Curt Lacy, Extension Livestock Economist  
Dennis Hancock, Extension Forage Specialist*

## Introduction

The UGA Feed Cost Analyzer is a spreadsheet-based decision aid to compare potential feedstuffs on a price per pound of crude protein and energy (total digestible nutrients; TDN). This program consists of a feed library prepopulated with some common feedstuffs, a least cost feedstuff analyzer, and a feedstuffs replacement calculator. Each page contains step by step directions on how to use this decision aid.

## System Requirements

This program was developed to run on Microsoft Excel 2007. Using an earlier version of Excel, or another spreadsheet program, may result in some loss of functionality. Check for software patches that are available from Microsoft's Web site for your version of Windows and Excel. These patches are free upgrades from Microsoft and may be accessed at <http://support.microsoft.com>. If using Excel 2007, be sure to check for and download the latest patches; otherwise, graphics might become disorientated when viewing the screens.

## Support

For support and questions, please contact your local Cooperative Extension office at 1-800-ASK-UGA1.
