Common hazardous household products by room:

Living Room: Carbon monoxide, candles, incense, tobacco smoke and lead.

Bedroom: Dry cleaning, mercury thermostat, tobacco smoke, mothballs and lead.

Garage: Pesticides, herbicides, fungicides, weed killer, fertilizer, automotive batteries, antifreeze, brake fluid, gasoline, diesel, motor oil, transmission fluid, starter fluid, carbon monoxide, and car polish and wax.

Kitchen: Ammonia, air freshener, furniture polish, lighter fluid, metal polish, oven cleaner, batteries, light bulbs and lead.

Bathroom: Medications, aerosol sprays, corrosive chemicals, disinfectants, drain cleaner, tub and tile cleaner, toilet bowl cleaner, window cleaner, and lead.

Laundry Room: Bleach, detergent, stain remover, fabric softeners and fluorescent light bulbs.

Basement: Paint, paint stripper, paint thinner, stain, turpentine, varnish and radon.

Select Safer Products

- Read the label to see if the ingredients are safe to use in your home.
- Buy fewer hazardous household chemicals. Look for signal words on the label. **POISON** means highly toxic. **DANGER** means extremely flammable or corrosive or highly toxic. **WARNING** or **CAUTION** means less toxic.
- Use multi-use products to limit the number of products in your home.
- Avoid using aerosol products with hazardous or toxic propellants.
- Use green cleaning products. Find recipes to make green cleaning products at www.georgiahealthyhousing.org.

Dispose of Products Properly

- Both alkaline and rechargeable batteries can be recycled.
- Gasoline and motor oil can be dropped off at automotive retail stores.
- Fluorescent lights contain small amounts of mercury and can often be dropped off for recycling in home improvement stores.
- Prescription drugs should not be washed down the sink nor flushed down the toilet. Improper disposal can result in water and soil contamination. Contact your local government to see if your community holds a prescription drug take back day.
- Work with your community to hold a hazardous household waste collection day.
- Find out where to take hazardous household items online at www.earth911.com or contact your local recycling or waste management provider.

Use and Store Products Safely

- Read and follow the directions on the label.
- Use in a well-ventilated area. Fumes from products such as bleach can cause harm to the eyes, nose, throat, esophagus, respiratory tract and lungs when used in an enclosed space.
- Never mix products containing bleach and ammonia.
- Remember, hazardous products may be flammable, explosive/reactive, corrosive/caustic, toxic/poisonous or reactive. Follow label directions for proper storage.
- Leave the product in its original container with the original label attached.
- Never store household products in food or beverage containers, including homemade green cleaning and pesticide products.
- Store on high shelves or in locked cabinets out of reach of children and animals.
- Keep volatile products—those that warn of vapors and fumes—in a well-ventilated area.
