STOP EATING WHEN YOU'RE FULL

Promote healthy eating habits by encouraging your family to stop eating when they are full

It's Important to Stop When You're Full

Almost 17% of children in the United States are considered obese. Childhood obesity often leads to other health concerns throughout the child's life, so it is important to teach your family healthy eating habits.

How do you know when you are full and finished with your meal? Many people decide when they are full based on external cues rather than listening to their own bodies. People readily assume that a meal is over when their plate is clean or when everyone else is finished eating.

It takes about 20 minutes to feel full once you have started eating. By eating slower, we can help our bodies know when to stop eating. In order to stay healthy, it is important to listen to these internal cues and stop eating once your body feels full. Encourage your children to stop eating when full, and do not insist that they clean their plates.

Use this activity to help your child learn

FAMILY FUN

Empty or Full

What You Need:

- Bowl
- Water

What To Do:

- Use this activity to help your child understand what it means to be "full" or "empty"
- Encourage your child to fill and empty the bowl with the water
- Talk with your child about what it means to be empty and full.
For Example:
 - "When the bowl is empty, there is no water in it"
 - "When the bowl is full, no more water can fit in it"
- Talk with your child about what might happen if you try to add more water when the bowl is full.

***CAUTION:** Supervise your child at all times when playing with water!
