

# FIELD GUIDE TO **AMBROSIA BEETLES**

of Agricultural Importance in the  
Eastern and Southern United States

**UNIVERSITY OF GEORGIA**  
**EXTENSION**

# Table of Contents

## Identification and anatomy of ambrosia beetles

|   |   |
|---|---|
| What you need for beetle identification ..... | 2 |
| Anatomy of the ambrosia beetle .....          | 3 |
| Procoxae .....                                | 4 |
| Declivity .....                               | 5 |
| Scutellum and spatulate hair .....            | 6 |

## The agriculturally important species

|  |    |
|--|----|
| <i>Xylosandrus crassiusculus</i> ..... | 8  |
| <i>Xylosandrus germanus</i> .....      | 9  |
| <i>Xylosandrus compactus</i> .....     | 10 |
| <i>Xyleborinus saxenii</i> .....       | 11 |
| <i>Xyleborinus rubicollis</i> .....    | 12 |
| <i>Xyleborus</i> spp.....              | 13 |
| <i>Hypothenemus</i> spp. ....          | 14 |
| <i>Cnestus mutilatus</i> .....         | 15 |

## Trapping and monitoring

|  |    |
|--|----|
| Factors that promote beetle attack ..... | 19 |
| Bottle trap .....                        | 20 |
| Log trap.....                            | 22 |

## External injury

|                         |    |
|-------------------------|----|
| Sawdust toothpicks..... | 26 |
| Holes .....             | 27 |
| Sap production.....     | 28 |

## Internal injury

|                            |    |
|----------------------------|----|
| Tissue discoloration ..... | 30 |
| Gallery formation .....    | 31 |
| Fungus.....                | 32 |

**IDENTIFICATION  
AND ANATOMY  
OF AMBROSIA  
BEETLES**

# What you need for beetle identification

◀ Microscope with adjustable light source

◀ Petri dish

◀ Thin paint brush

◀ Miniscale

◀ Forceps

# Anatomy of the ambrosia beetle

# Procoxae

Photo: JH

Separated  
Procoxae

Photo: JH

Contiguous  
Procoxae

Photo: PDIL

# Declivity

Spiny declivity

Smooth declivity

Less hairy declivity

Hairy declivity

All photos: JH

# Scutellum and spatulate hair

Spiny and conical scutellum

Flat scutellum

Spatulate hair

All photos: JH

# **THE AGRICULTURALLY IMPORTANT SPECIES OF AMBROSIA BEETLE**

**NOTE: ILLUSTRATIONS AND SIZES ARE  
BASED ON FEMALE BEETLES, WHICH  
COMMONLY ARE ATTRACTED TO  
ALCOHOL-BAITED TRAPS.**

# *Xylosandrus crassiusculus* (Motschulsky)

## Granulate Ambrosia Beetle

Photo: AM2

Photo: AM2

Photo: PH

### **Procoxae**

Separated

### **Declivity**

Hairy, dull and bumpy

### **Female size**

Approximately 3 mm in length

### **Color**

Reddish/orange-brown

### **Scutellum**

Flat

## **Economically important hosts**

apples, peaches, pecans, magnolias, and maple

# *Xylosandrus germanus* (Blandford)

## Black Stem Borer

Photo: AM2

### Procoxae

Separated

### Declivity

Alternating hair, shiny

Photo: AM2

### Female size

Smaller than *X. crassiusculus* but bigger than *X. compactus*, approx. 2 mm

### Color

Black

### Scutellum

Flat

Photo: PH

## Economically important hosts

apples, magnolias, pecans, pines

*Xylosandrus compactus* (Eichhoff)

## Black Twig Borer

Photo: JH

1.0 mm

### Procoxae

Separated

### Declivity

Hairy, striae setae present, shiny

### Female size

less than 1.7 mm

### Color

Black

### Scutellum

Flat

Photo: AM2

50  $\mu$ m

Photo: PH

## Economically important hosts

apples, magnolias, maples

*Xyleborinus saxesenii* (Ratzeburg)  
**Fruit-tree pinhole borer**

Photo: AM2

Photo: AM2

Photo: PH

**Procoxae**

Contiguous

**Declivity**

Small spines

**Female size**

1.9–2.4 mm

**Color**

Reddish-brown/  
black

**Scutellum**

Conical and hairy

**Economically important hosts**

apples, peaches, pecans, pines, magnolias, maples

# *Ambrosiodmus rubricollis* (Eichhoff)

1.0 mm

Photo: JH

## **Procoxae**

Contiguous

## **Declivity**

Hairy, less bumpy than *Xylosandrus crassiusculus*

## **Female size**

2.4–2.7 mm

## **Pronotum**

Entirely bumpy (more than the other species)

## **Color**

Reddish/orange-brown

## **Scutellum**

Flat

Photo: JH

Photo: PH

## **Economically important hosts**

dogwoods, pecans

# *Xyleborus* spp.

Photo: AM2

## **Procoxae**

Contiguous

## **Declivity**

Has spines, hairy

## **Size**

2.0–2.9 mm

## **Color**

Reddish brown

## **Scutellum**

Flat and hairless

Photo: AM2

Photo: PH

## **Economically important hosts**

maples, pines, peaches

# *Hypothenemus* spp.

Photo: AM2

## **Procoxae**

Separated

## **Declivity**

Spatulate hair

## **Size**

1–2 mm

## **Color**

Black

## **Scutellum**

Flat

Photo: AM2

## **Economically important hosts**

apples, magnolias, pecans, pines

# *Cnestus mutilatus* (Blandford)

## Camphor Shot Borer

Photo: AM2

Photo: AM2

Photo: PH

### **Declivity**

Close to thorax because of short, compressed abdomen

### **Size**

3.4–3.9 mm

### **Color**

Black

### **Scutellum**

Flat

## **Economically important hosts**

maples, sweetgums, dogwood, cherry, elm, golden rain tree, magnolia, oak, and poplar

# **TRAPPING AND MONITORING**

# Factors that promote attack

**Tree stress promotes attack. Stress may come from the following:**

- Frost damage
- Flooding
- Poor soil drainage
- Drought
- Previous injury to tree
- Disease

Photo: CR

# *Bottle trap*

## **Intended use**

Insect identification, activity monitoring, and research purposes.

Photo: AM

**Stake**

**Zip ties**

**Plastic bottle**

**Ethanol lure**

**Soapy water**

(add propylene glycol during cold seasons)

**Trap height**

Approximately 2–3 ft from the ground.

## Where to deploy?

Deploy the bottle traps along the wood line as well as inside the nursery/orchard.

## When to deploy?

Deploy the bottle traps before the warmer spring weather (when the temperature is approximately 68 °F).

## When to check?

Check the bottle traps weekly. Replace the soapy water using a coffee filter and strainer.

Photo: CR

# Bolt trap

## Intended use

Monitoring attacks and ambrosia beetle activity. This trap is recommended for grower use.

Photo: AAD

### Stake

### Hole drilled into log and covered with a cork.

Hole should be about 4 in. deep and 1 cm wide. Fill hole with ethyl alcohol (i.e., ethanol, or drinking alcohol). Denatured ethanol also can be used.

**Log** (1–2 ft long, 2 in. wide)

### Trap height

Approximately 1–2 ft from the ground.

## Where to deploy?

Deploy the bolt traps along the wood line as well as inside the nursery/orchard.

## When to deploy?

Deploy the bolt traps before the warmer spring weather (when the temperature is approximately 68 °F).

## What to look for?

Sawdust “toothpicks” and holes.

All photos: AAD

# **EXTERNAL INJURY**

# Sawdust “toothpicks”

All photos: AM

# Holes

Photo: AM
